## Outdoor fractions

Find these items and then find out what half $\left(\frac{1}{2}\right)$ and one quarter ( $\left(\frac{1}{4}\right)$ would be.

Remember you can put them into groups to help you!
For example, when finding $\frac{1}{2}$ you will put the items into 2 equal groups and count how many items are in one of those groups.

When finding $\frac{1}{4}$ you will put the items into 4 equal groups and find how many items are in one of those groups.

| Go and find... | $\frac{1}{2}$ would be | $\frac{1}{4}$ would be |
| :--- | :--- | :--- |
| 8 |  |  |
| 14 |  |  |
| 8 |  |  |
| 6 of any item of <br> your choice! |  |  |
